FIELD NOTES

RECEIVED

FEB 14 1939

U. S. Department of Interior  
Public Survey Office  
Salt Lake City, Utah

OF THE DEPENDENT RESURVEY AND SURVEY OF A PORTION OF THE

SUBDIVISIONAL LINES COMPLETING THE SUBDIVISIONS

AND THE

ESTABLISHMENT OF QUARTER SEC. CORNS. BETWEEN CLOSING CORNERS

ALONG PORTIONS OF THE NORTH AND WEST BOUNDARIES

ALL OF

T. 43 S., R. 5 W.

Of the SALT LAKE Meridian,

the State of UTAH

EXECUTED BY

ANDREW NELSON, SURVEYOR

Under special instructions dated NOVEMBER 9, 1921, which provided

for the surveys included under Group No. 122, bearing the approval of the

Commissioner of the General Land Office under date of JANUARY 6, 1922

and assignment instructions dated APRIL 1, 1937

Survey commenced APRIL 10, 1937

Survey completed MAY 25, 1937

See to Tom's spring in sec. 6 - Page 54.

T. 43 S., R. 5 W.

The survey was executed with Buff and Buff solar transit No. 16726, property of the General Land Office. The horizontal circle has a diameter of  $4\frac{1}{2}$  ins., with two double opposite verniers reading to single minutes; the vertical circle has a diameter of 4 ins., with one double vernier reading to single minutes. The instrument is equipped with the improved Smith solar attachment; radius of latitude arc  $2\frac{1}{2}$  ins., and of declination arc  $3\frac{1}{2}$  ins., each with verniers reading to single minutes. The instrument was in good condition, and having been placed in satisfactory adjustment prior to beginning the survey, and tested and found free from appreciable error, was approved by the district cadastral engineer on April 1, 1937, in assignment instructions. I examined all the instrumental adjustments before making the field tests hereinafter recorded.

The solar attachment was not used on this survey; all azimuth determinations were accomplished by observations made upon Polaris; the bearings computed from deflection angles and the lines carried forward by double fore and back sights. Several Polaris observations were made during the progress of the survey as checks.

The measurements were made with a Lallie steel ribbon tape 8 chains in length, graduated every link for the first 100 lks., and the balance at intervals of 10 lks.; the tape was tested by comparison with a Lufkin standard and found correct. The measurements were made on the slope, and the vertical angle of each interval was ascertained by large improved clinometers, two to each tape, in good adjustment; the horizontal equivalents are entered in the field note record.

The approximate geographic position of the southwest corner of the township is as follows: Latitude  $37^{\circ} 01' N.$ ; longitude  $112^{\circ} 28' W.$

April 10, 1937, at the corner of Ts. 43 and 44 S., Rs. 5 and 6 W., I make an hour angle observation on Polaris east of the meridian, making four observations, two each with the telescope in direct and reversed positions, reading the horizontal deflection angle from star W. to a reference flag N. about  $\frac{1}{2}$  mile distant. Watch time of observation is 11h 26m 22s a.m.; and is fast of local mean time 29m 19s as determined by radio signals.

Local mean time of observation.	10h 57m 03s a.m.
Mean horizontal angle, Polaris to flag.	$3^{\circ} 04' 15''$
Azimuth of Polaris at observation.	$0^{\circ} 29.7'$
True bearing of flag.	N. $2^{\circ} 34' 30'' W.$

#### Dependent Resurvey of Portion of Subdivisions of T. 43 S., R. 5 W.

Reestablishment of surveys executed by Bailey and Burrill, U. S. Deputy Surveyors, in 1877.

The resurvey is a restoration of the subdivisional lines forming the boundary of the unsurveyed areas of T. 43 S., R. 5 W., in the true original positions, as adjusted to identified evidence. Before reconstructing or restoring the corners, the necessary retracements were made of the lines of the original survey, and search was made for evidence of the original corner monuments, and other call of the field notes. When duly identified or restored the corner positions were remonumented.

After completing the necessary retracements, to connect with identified corner locations, the rules of proportionate measurement, or record measurements, dependent upon the calls of the original survey, were used in order to ascertain the position of each lost corner.

The retracement data were submitted for office examination and verification. In order to simplify the record, the true line notes only are supplied here, which refer to the completed resurvey.

2

Dependent Resurvey of  
Portion of Subdivision of T. 43 S., R. 5 W.

Chains

From the  $\frac{1}{4}$  sec. cor. bet. secs. 23 and 24, which is a sandstone, 22x12x2 ins., marked plainly  $\frac{1}{4}$  on one face, lying on the ground; unwitnessed.

At point for cor.

Set an iron post, 3 ft. long, 1 in. diam., 27 ins. in the ground, for  $\frac{1}{4}$  sec. cor., with brass cap marked

$\frac{1}{4}$   
S23 | S24  
1937

from which

A cedar, 6 ins. diam., bears N. 77° 45' E., 43 lks.  
dist., marked  $\frac{1}{4}$  S 24 B T.

A cedar, 5 ins. diam., bears N. 64 $\frac{1}{2}$ ° W., 95 lks.  
dist., marked  $\frac{1}{4}$  S 23 B T.

From this cor., a small frame cabin, bears S. 18° W., about 8.00 chs. dist.

Thence

N. 0° 08' E., bet. secs. 23 and 24.

Over gently rolling bench with gentle SE. slope, through scattered cedar and pinon timber, and medium dense sagebrush.

19.30 N. edge of low bench, bears NW. and SE.; thence over gentle NE. slope, descending 10 ft. into swale.

29.60 Dry wash, 4 ft. deep, 10 lks. wide, in bottom of wide shallow swale, drains SE.; enter broken E. slope; ascend.

34.00 E. point of low rise from NW., 135 ft. above  $\frac{1}{4}$  sec. cor.; slight descent over rocky E. slope.

39.40 Rocky draw, drains SE.

39.82 Proportionate distance between the cor. of secs. 1, 2, 35, and 36, on N. bdy., and the  $\frac{1}{4}$  sec. cor. bet. secs. 23 and 24, and at record distance from the cor. of secs. 13, 18, 19, and 24, on E. bdy. of Tp.; no evidence of sec. cor. found.

Set an iron post, 3 ft. long, 2 ins. diam., 20 ins. in the ground to underlying rock and supported by large mound of stone to top, for restored cor. of secs. 13, 14, 23, and 24, with brass cap marked

T43S R5W  
S14 | S13  
S23 | S24

1937

from which

A pinon, 12 ins. diam., bears N. 50° E., 90 lks.  
dist., marked T43SR5WS13BT.

A pinon, 10 ins. diam., bears S. 23° E., 51 lks.  
dist., marked T43SR5WS24BT.

A pinon, 12 ins. diam., bears S. 84° W., 131 lks.  
dist., marked T43SR5WS23BT.

A pinon, 12 ins. diam., bears N. 61 $\frac{1}{2}$ ° W., 61 lks.  
dist., marked T43SR5WS14BT.

To verify Dependent Resurvey of  
 . . . . . Portion of Subdivision of T<sub>2</sub> 43 S. R. 5 W.

## Chains

Cor. stands in bottom of draw at base of rocky rim. From this cor. the cor. of secs. 13, 18, 19, and 24, on E. bdy. of Tp., bears S. 89° 33' E., 80.00 chs. dist.; a sandstone, 12x8x7 ins., marked with 3 notches on N. and S. faces, found buried in the ground alongside of a cedar post, 6 ins. diam., 5 ft. long.

At point for corner.

Set an iron post, 3 ft. long, 2 ins. diam., 30 ins. in the ground, with original cor. monument and glass deposited at base, for cor. of secs. 13, 18, 19, and 24, with brass cap marked

from which

A cedar, 10 ins. diam., bears N.  $49\frac{1}{2}^{\circ}$  E., 216 lks.  
dist., marked T43S R5W S2 BT.

No other suitable accessories available.

Corner stands in bottom of open swale, drains N.  $10^{\circ}$  W.

From this corner, cor. of secs. 1 and 12 on east bdy. of Tp. bears  
N.  $89^{\circ} 53'$  E. 160.00 chs. dist.; an iron post 3 ins. diam., properly  
set, marked, and witnessed as described in the official record.

Land, rough and broken; general easterly exposure and drainage toward  
Johnson Canyon.

Soil, rocky of sandstone formation and loose sand; 4th rate.

Timber, medium dense to scattering cedar and pinon.

Undergrowth, sagebrush, oak and rabbit brush.

Fair grazing land on portions of mile.

N.  $0^{\circ} 06'$  E., on W. bdy. sec. 2.

Over rolling land, through scattered timber and undergrowth. Gradually  
desc. N. slope.

1.63 The closing cor. of secs. 3 and 10, hereinafter described.

34.00 Bottom of wide, flat open hollow, 40 ft. below sec. cor., drains NE.;  
gradually asc.

40.00 Record distance; no evidence of  $\frac{1}{4}$  sec. cor. found.

Set an iron post, 3 ft. long, 1 in. diam., drilled 18 ins. into solid  
rock, and supported by a mound of stone, for restored  $\frac{1}{4}$  sec. cor. of  
sec. 2 only, with brass cap marked

A pinon, 12 ins. diam., bears N.  $70^{\circ}$  W., 10 lks. dist., marked T43S R5W S15 BT.

No suitable tree available in sec. 22.

Land, rough and broken rims of the Vermilion Cliffs; general N. and E. exposures and drainage.

Soil, rocky in form of ledges and boulders with shallow clay and sand on the rims; deep, loose sand in hollow bottom; 2nd to 4th rates.

Timber, medium dense cedar and pinon, except in hollow.

Undergrowth, sagebrush.

Fair to poor grazing land.

From the cor. of secs. 13, 14, 23, and 24.

West, on true line bet. secs. 14 and 23.

Over rough mountainous land, through medium dense timber and scattered undergrowth.

0.45 Bottom of draw, drains SE.; asc. steep, ledgy E. slope.

1.70 Sandstone ledge, 30 ft. high, bears NW. and S.

4.90 Top of rocky point, 165 ft. above cor., extends SE. for 2 chs. to end; desc. broken SW. slope.

9.10 Draw, 110 ft. below top, drains SE., and heads NW. about 5 chs. dist.; asc. 215 ft. over broken ledges.

17.30 Top of ascent on flat point of rim, bears NE. and extends S. about 5 chs. dist. to end.

20.60 Desc. ledgy SW. slope, 125 ft.

29.50 Draw, near head, drains S.; asc. ledgy E. slope, 175 ft.

37.80 On top of point of rim extending S. about 2 chs. dist.; at this point,

Set an iron post, 3 ft. long, 1 in. diam., 14 ins. in the ground to bedrock and supported by a large mound of stone to top, for the witness cor. to the  $\frac{1}{4}$  sec. cor., with brass cap marked

W  $\frac{1}{4}$  S14

A cedar, 5 ins. diam., bears S.  $32^{\circ}$  W., 130 lks.  
dist., marked  $\frac{1}{4}$  S6 BT.

Corner stands on a gradual sandy NW. slope.

From this corner the  $\frac{1}{4}$  sec. cor. bet. secs. 6 and 31, which is an  
iron post, 1 in. diam., properly set, marked and witnessed, bears  
East  $4.72$  chs. dist. I efface the marks on post and bearing tree  
that pertain to sec. 6, leaving the  $\frac{1}{4}$  sec. cor. for sec. 31 only.

## Subdivision of T. 43 S., R. 5 W.

## Chains

Land, rolling with a gently easterly exposure.  
Soil, deep loose sand, 3rd rate.  
Timber, cedar and pinon.  
Undergrowth, sagebrush.  
Fair grazing land.

## Tie to Spring in Sec. 6.

In order to locate Tom's Spring in sec. 6, I commence at the closing cor. of Ts. 42 and 43 S., R. 5 W.

Thence

S. 39° E., 27.90 chs. dist. to point from which:

A concrete box, 3 ft. square, at head of small spring and pipe line, bears N. 11° W., 3.54 chs. dist.

Mouth of 12 ft. tunnel and small seep, bears N. 31° 45' E., 2.58 chs. dist., also head of pipe leading to trough.

Mouth of 5 ft. tunnel with small seep, bears S. 34½° E., 2.43 chs. dist.

N. 9° W., 0.90 chs. dist. to center of metal trough.

S. 12° E., 0.37 chs. dist. to center line metal trough.

These small seeps and spring are locally known as "Tom's Spring."

## GENERAL DESCRIPTION

The land embraced within the newly surveyed portion of T. 43 S., R. 5 W. is mostly rough broken mesa or bench lying on top of the Vermilion Cliffs which form the south side of mesa. The Vermilion Cliffs facing south are approximately 300 ft. in height with series of vertical sandstone ledges from 20 to 100 ft. high, terraced with narrow benches or shelves and broken by few canyons or gulches.

The greater portion of the township drains easterly into Johnson Wash, draining southeasterly through the old surveyed area in the NE. part. The extreme west portion drains westerly into Kanab Creek.

The township is covered in most parts with scrub timber of juniper and pinon pine, and undergrowth of sage, service, buck, and rabbit brush. Very little, if any, land is suitable for cultivation, but affords fair grazing for cattle and sheep during portions of the year.

The only water found in this portion of township consists of small seeps and springs located as follows: Small seeps in bottom of narrow gulch in SE¼ sec. 19, and SW¼ sec. 20, sinks shortly after entering sec. 30; very small alkali seep spring in main wash, in SW¼ sec. 30; very small drip spring known as "Pugh Spring" on S. face of mesa slope in SE¼ NW¼ sec. 20, piped to trough in SW¼ of sec. 28; Sheep Spring in NW¼ SE¼ sec. 5; North Sheep Spring in Lot 3 of sec. 5; and Tom's Spring located in NW¼ sec. 6. All these springs and seeps are being utilized for the watering of stock.

There are no settlers nor improvements in the part of this township under survey. Kanab, Utah, is located about 3 miles westerly of the township and the settlement of Johnson is located in the old surveyed area along Johnson Wash. The road between these points follows along under the Vermilion Cliffs through the south portion of township.

No indications of mineral, coal, oil, or oil shale were noted in the township.

# CERTIFICATE OF ~~UNITED STATES~~ SURVEYOR

I, Andrew Nelson, Surveyor, HEREBY CERTIFY upon honor the  
pursuance of special instructions bearing date of the 9th day of November,  
received from the district cadastral engineer for Utah, with assigned  
instructions dated April 1, 1937, I have ~~surveyed~~ made a dependent resurvey and  
of a portion of the subdivisional lines, completing the subdivisions, and the est-  
lishment of 2 section corners between closing corners along portions of the north  
and west boundaries; all of T. 43 S., R. 5 W.  
of the Salt Lake Meridian, in the State of Utah, which  
represented in the foregoing field notes as having been executed by me and under my direction; and that  
survey has been made in strict conformity with said instructions, the Manual of Instructions for the Survey  
of the Public Lands of the United States, and in the specific manner described in the foregoing field notes.  
Salt Lake City, Utah  
February 15, 1939

Andrew Nelson  
Surveyor

## CERTIFICATE OF APPROVAL

OFFICE OF ~~U.S.~~ SUPERVISOR OF SURVEYS,

Denver, Colorado, Feb. 16, 1942

The foregoing field notes of the survey of dependent resurvey and survey of subdivisions  
lines completing the subdivisions, and establishment of 2 sec. cors. along portions  
of the N. and W. bdrs.; all of T. 43 S., R. 5 W.

executed by Andrew Nelson, Surveyor  
under special instructions dated November 9, 1921, and assignment  
instructions dated April 1, 1937, having been critically examined, and  
the necessary corrections made prior to their certification by the engineer, the said field notes, and the survey  
herein described, are hereby approved.

Frank A. Cannon  
U.S. Supervisor of Surveys.

## CERTIFICATE OF TRANSCRIPT

I CERTIFY that the foregoing transcript of the field notes of the above-described surveys in Utah  
, is a true copy of the original field notes on file in the public survey office.

Frank A. Cannon  
U.S. Supervisor of Surveys.

# FIELD NOTES

OF THE SURVEY OF THE  
SUBDIVISIONS.

DEPENDENT RESURVEY OF THE

SOUTH BOUNDARY, TWO MILES OF THE NORTH BOUNDARY,

AND A PORTION OF THE SUBDIVISIONS.

T. 2 S., R. 25 E.

AND ESTABLISHMENT OF  $\frac{1}{4}$  SEC. CORNERS BETWEEN CLOSING

CORNERS FOR T. 2 S., R. 25 E., ALONG UTAH-COLORADO

STATE BOUNDARY, AND LOT CORNER, SECTION 6 ON W. BDY.

Of the Salt Lake Base and Meridian,

in the State of Utah

EXECUTED BY

Chas. F. Moore

United States Surveyor.

Under special instructions dated March 2nd, 1928, which provided

for the surveys included under Group No. 202, bearing the approval of the

Commissioner of the General Land Office under date of May 12, 1928

and assignment instructions dated May 1st, 1931, 19

Survey commenced May 24, 1931

Survey completed July 14th, 1931.

Survey commenced May 24, 1931, and was executed with Buff and Buff light mountain transit, No. 9983; the instrument is equipped with full vertical circle and the Smith solar attachment; unless otherwise specified all azimuth determinations are accomplished with the solar attachment. The instrument was in good condition, and having been placed in satisfactory adjustment prior to the beginning the survey, and tested and found free from appreciable error, was approved by the district cadastral engineer on May 1, 1931. I examined all the instrumental adjustments before making the field tests hereinafter recorded.

The measurements were made with Lallie steel tape, 8 chs. in length, graduated every link for the first 100 lks., and the balance at intervals of 10 lks. The tape was tested by comparison with a Lufkin standard 1 ch. tape and found correct. The measurements were made on the slope, and the vertical angle of each interval was ascertained by clinometers in good adjustment; the horizontal equivalents are entered in the field note record.

The data furnished with the special instructions gives the geographic position of the SE. cor. of the Tp., as follows: latitude  $40^{\circ}36'N$ , and longitude  $109^{\circ}03'W$ .

May 24, 1931, in camp in the SW.  $\frac{1}{4}$  of sec. 20, T. 2 S., R. 25 E., at 3h 35m a.m. l.m.t. I observe Polaris at eastern elongation, making two sights each with the telescope in direct and reversed positions, and place a tack at the mean point, on a peg driven firmly in the ground 10 chs. N. May 24th, at 6 a.m. l.m.t. I lay off the azimuth of Polaris,  $1^{\circ}24'$  and make a meridian mark on a second peg to the west of the mean point in the line determined by the observation.

In order to verify the latitude of this station, May 24. I make a meridian observation of the sun, first setting on the lower limb and noting the transit of the west limb, then, after reversal of the instrument,

setting on the upper limb and noting the transit of the east limb as follows:

Mean observed altitude-----70°04'  
Reduced latitude-----40°38'N.

Every 30 min. from 7 to 10:30 a.m. and from 1:30 to 5 p.m., I make the proper settings on the arcs of the solar attachment and ascertain that the resulting orientation of the instrument, when compared with the meridian established by Polaris observation, has a maximum error of less than 1'30".

I repeat the tests of the arcs daily by noon observation, and verify the meridional indications at frequent intervals throughout the survey.

---

DEPENDENT RESURVEY OF THE SOUTH BOUNDARY T.2 S., R. 25 E.

"Reestablishment of the surveys executed by Edgar F. Harmston, U.S. Deputy Surveyor in 1903".

Random Lines.

From the cor. of Tps. 2 and 3 S., Rs. 24 and 25 E., hereinafter described.

East, on random line bet. secs. 6 and 31.

40.00 Intersect the  $\frac{1}{4}$  sec. cor., for secs. 6 and 31, hereinafter described.

78.60 Intersect the corner of secs. 5, 6, 31 and 32, hereinafter described.

Therefore the true bearing of this mile is East, distance of the  $W\frac{1}{2}$  mile is 40.00 chs. and  $E\frac{1}{2}$  mile is 38.60 chs.

---

East on random line bet. secs. 5 and 32.

40.44 Fall 36 lks. S. of the  $\frac{1}{4}$  sec. cor., for secs. 5 and 32, hereinafter described.

Therefore the true bearing of this half mile is N.89° 29'E., 40.44 chs.

Thence from the  $\frac{1}{4}$  sec. cor., with continuous measurement.

79.18 Fall 64 lks. S. of the cor. of secs. 4, 5, 32 and 33,

38. . . . . DEPENDENT RESURVEY OF THE SOUTH BOUNDARY OF T.2 S., R.25 E.

Chains	<p>hereinafter described.</p> <p>Therefore the true bearing of this half mile is N.89°03'E., 38.75 chs.</p> <hr/> <p>East, on random line bet. secs. 4 and 33.</p>
40.13	<p>Fall <math>3\frac{1}{2}</math> lks. S. of the <math>\frac{1}{4}</math> sec. cor., for secs. 4 and 33, hereinafter described. The true bearing of this half mile is N.89°57'E., 40.13 chs. dist. Thence from the <math>\frac{1}{4}</math> sec. cor., with continuous measurement.</p>
79.41	<p>Fall 2.61 chs. N. of the cor. of secs. 3, 4, 33 and 34, hereinafter described.</p> <p>Therefore the true bearing of this half mile is S.86°12'E., 39.37 chs. dist.</p> <hr/> <p>East, on random line bet. secs. 3 and 34.</p>
39.96	<p>Fall 55 lks. N. of the <math>\frac{1}{4}</math> sec. cor., for secs. 3 and 34, hereinafter described.</p> <p>Therefore the true bearing of this half mile is S.89°13'E., 39.96 chs.</p> <p>Thence from the <math>\frac{1}{4}</math> sec. cor., with continuous measurement.</p>
80.16	<p>Fall <math>45\frac{1}{2}</math> lks. S. of the cor. of secs. 2, 3, 34 and 35, hereinafter described.</p> <p>Therefore the true bearing of this half mile is N.89°21'E., 40.20 chs.</p> <hr/> <p>East, on random line bet. secs. 2 and 35.</p>
43.05	<p>Fall 44 lks. S. of the witness <math>\frac{1}{4}</math> sec. cor., for secs. 2 and 35, which is witnessed 46 lks. West of the true cor. point and hereinafter described.</p> <p>The true bearing of this <del>line therefore is</del> N.89°25'E., 43.05 chs. to W. C. to <math>\frac{1}{4}</math> sec. corner.</p> <p>Thence from the witness <math>\frac{1}{4}</math> sec. cor., with continuous measurement.</p> <p>The line to the east descends over vertical ledges and precipitous slope over which chaining is impracticable. Therefore to determine the distance I triangulate</p>

# DEPENDENT RESURVEY OF THE SOUTH BOUNDARY

Chains

as follows:

Erect flag A at this point and set flag B to the East on line. Also set flag C northeasterly from A. The mean distance of the base line BC is 7.199 chs. by two set of chainmen with no difference in measurement. This was the longest practicable base line available. The angles were determined by three repetitions with error balanced to 180°. The vertical angle from A to B is minus 19°45'.

Angle at point A is 10°23'  
Angle at point B is 90°17'  
Angle at point C is 79°20'

Distance on line to point A	43.05 chs.
Distance by triangulation A to B	39.25 chs.
Total distance on line	82.30 chs.
Distance by return measurement	0.06 chs.
	82.24 chs.

82.24 Fall 3 1/2 lks. S. of the cor. of secs. 1, 2, 35 and 36, hereinafter described.

Therefore the true bearing of this line is N. 89°57'E., 39.12 chs. from W. C. to 1/2 sec. corner.

East, on random line bet. secs. 1 and 36.

40.00 No trace of the original 1/2 sec. cor., could be found.  
Set temp. 1/2 sec. cor.

89.30 Intersect the Utah- Colorado State Boundary, N. 1°18'E., 5.24 chs. dist., from the 249th mile corner.  
After diligent search no trace of the original closing corner could be found.

## TRUE LINES.

	Note: No trace of the original closing cor. of Tps. 2 and 3 S., R. 25 E., can be found; the cor. therefore

33. DEPENDENT RESURVEY OF THE SOUTH BOUNDARY OF T.2 S., R.25 E.

Chains:

is reestablished at record course east of the cor. of secs. 1 and 2 on the N. bdy., of T. 3 S., R. 25 E., for the reason that no ties were made in the original survey of T. 3 S., R. 25 E., to any corner on the State Boundary, south of the 250th mile post. Also the official record shows a discrepancy of about 50.00 chs. in distance bet. the 250th mile cor. and the nearest identified cor. on the boundary to the south; and that a restoration of the closing cor. in accordance with the manual rules appears impracticable in this case. The record tie from the closing corner to the 250th mile cor. was not used in the restoration as it would produce unusual distortion on the N. bdy of sec. 1, T. 3 S., R. 25 E.

Land, mountainous; general drainage and exposure S.  
Soil, loose sandy loam and surface sandstone; 3rd rate.  
Timber, juniper and pinon.  
Undergrowth, sagebrush.  
Fair grazing.

DEPENDENT RESURVEY OF THE NORTH BOUNDARY OF T.2 S., R.25 E.

"Reestablishment of the surveys executed by E. Buettner U.S. Deputy Surveyor, in 1879".

Random lines

From the cor. of T. 1 S., Rs. 24 and 25 E., hereinafter described.

East, on random line on the S. bdy of sec. 31.

38.49 Fall 62 lks. S. of the  $\frac{1}{4}$  sec. cor., for sec. 31, hereinafter described.

Therefore the true bearing of this half mile is N.89° 05' E., 38.50 chs. distance.

Thence

From the  $\frac{1}{4}$  sec. cor., East, with continuous measurement.

78.49 After diligent search no trace of the orig. cor. of secs. 31 and 32 could be found. Set temp. cor.

DEPENDENT RESURVEY OF THE NORTH BOUNDARY OF T. 24 S., R. 25 E.

Chains East on random line on S. bdy of sec. 32.  
 37.14 Set flag designated as A for future triangulation.  
 40.00 After diligent search no trace of the orig.  $\frac{1}{2}$  sec. cor. could be found.

The line to the east descends over vertical ledges and precipitous slope over which chaining is impracticable. Therefore to determine the distance I return to flag A set for triangulation and triangulate as follows  
 Set flag B on line to the East, also set flag C northeasterly from A the mean distance of 28.70 chs.  
 by 1st set of chainmen 28.69 chs.  
 by 2nd set of chainmen 28.71 chs.

The angles were determined by three repetitions with the error balance to 180°. The vertical angle from A to B is - 21 $\frac{1}{4}$ °.

Angle at point A 87°18'  
 Angle at point B 34°05'  
 Angle at point C 58°37'

Distance on line to point A-----	37.14 chs.
Distance by triangulation A to B-----	43.72 chs.
Total distance on line to B-----	80.86 chs.
Distance by return measurement-----	10.65 chs.
	70.21 chs.

70.21 Set temp. witness cor. for lots 1 and 2, Sec 2 4., T. 2.S., R. 25 E.

79.64 Fall 1.72 chs. S. of the cor. of secs. 4, 5, 32 and 33, hereinafter described.

Therefore the the true bearing of the E.  $\frac{1}{2}$  mile on the S. bdy of sec. 31, and the S. bdy of sec. 32 is N. 89°11'E., and the proportionate distance to each  $\frac{1}{2}$  mile is 39.88 chains.

True lines.

From the cor. of T. 1 S., Rs. 24 and 25 E., which is a cross chiseled in the solid rock with 6 notches cut in the solid stone E. and W. of the cross and a

chain, mound of stone to the north.

At the exact corner point

Set an iron post, 3 ft. long, 3 ins. diam., over the

X cut in the solid rock, and surrounded by mound of stone to the top, for the cor. of secs. 31 and 32.

Chains

The line to the south crosses Diamond Canyon, which has precipitous slopes and ledges over which chaining is impracticable. Therefore to determine the distance I triangulate as follows:  
Erect flag A at the temp. cor. for secs. 26, 27, 34 and 35, set flag B to the south on line and erect flag C southwesterly from A. The mean distance of the base line AC is 8.223 chs. (No longer base obtainable) with no difference in the measurement by two set of chairmen. The angles were determined by three repetitions with the error balanced to 180°. The vertical angle from A to B is -6°.

Angle at point A is 89°45'

Angle at point B is 10°16'

Angle at point C is 79°59'

Distance by triangulation - - - - - 45.45 chs.

Distance by return measurement - - - - - 45.23

40.00 Point. for temp. & sec. cor., falls on inaccessible ledge

Soil, loose gravelly loam; 3rd rate.  
Timber, juniper and fir.  
Undergrowth, sagebrush, service berry, buck and mahogany brush.  
Fair grazing.

East, on true line, along the N.bdy. of sec. 13.  
Over mountainous land, through dense undergrowth.  
Ascend 20 ft. over SW. slope.

6.00 Top of divide, bet. Diamond Canyon and Pot Creek, bears SE. from N. Descend 1225 ft. over NE. slope to the wit.  $\frac{1}{2}$  sec. cor.

11.64 Point for the closing cor. of secs. 11 and 12, hereinafter described.

The line to the East, descends over precipitous NE. slope and vertical ledges, over which chaining is impracticable. Therefore to determine the distance I triangulate as follows:

Erect flag A at this point and set flag B to the east on line, erect flag C north, from A the mean distance of 12.15 chs.

by 1st set of chainmen 12.151 chs.  
by 2nd set of chainmen 12.149 chs.

The angles were determined by three repetitions with the error balanced to 180°. The vertical angle from A to B is  $\sim 19^{\circ}30'$ .

Angle at point A is  $90^{\circ}00'$   
Angle at point B is  $13^{\circ}57'$   
Angle at point C is  $76^{\circ}03'$

Distance on line to point A-----11.64 chs.  
Distance by triangulation to B-----48.91 chs.

SUBDIVISION OF T.2 S., R. 25 E.

July 14, 1931: At my camp in the SW $\frac{1}{4}$  of sec. 20, T. 2 S. R. 25 E., at 9 a.m. l.m.t ; I set off 40°38'N on the Lat. arc; 21°47'N. on the decl. arc; and orient the instrument with the solar; the line of sight agrees with the meridian established by Polaris observation.

## FINAL TEST OF INSTRUMENT

At 3h 00m p.m., l.m.t. I set off  $40^{\circ}38'N.$  on the ~~lateral~~ arc;  $21^{\circ}44'30"N.$  on the decl. arc; and repeat the test of the solar; the line of sight agrees with the meridian established by Polaris observation.

### GENERAL DESCRIPTION

The land embraced in this township consists of broken mountains with flat top ridges and deep draws. It ranges from 5500 ft. to 7,000 ft. above sea level. The soil consists of a loose sandy loam mixed with sandstone and limestone. The entire township has a growth of timber, ranging from very scattering on top of the ridges to heavy on the slopes of the draws. Juniper and pinon are <sup>the</sup> principal timber, with some ash cottonwood and willow along the bottom of Diamond Canyon, and aspen, pine and fir on the divide between Diamond Canyon and Hot Creek. This timber is not being used for any commercial purpose at present, but the pinon and juniper are good for fence posts and fire wood. The pine and fir are good for house logs and rough lumber. The undergrowth is dense over the entire township. Sagebrush is very heavy on top of the ridges, with service berry, mahogany and buck brush on the slopes. There are some wild goose berry, rose, willow and buck brush in the bottom of the canyons. The grasses are scarce, from over stocking with sheep, but the principal grass is the mountain blue stem which affords very good grazing.

The township is used principally for spring and fall range for sheep. They graze here from May 1st to July 1st, and from October 1st to November 1st. The snow is too deep for winter grazing of live stock. Two bands of sheep are summered here, approximately 1500 head.

The water is very scarce, and the livestock are watered from shallow wells, from 10 to 15 ft. deep. The water from these wells is very good, and there seems to be a good flow.

## GENERAL DESCRIPTION

The township on the whole is not suitable for farming, the soil is too loose and gravelly. The rainfall in the summer months is small.

The following settlers live in the township through part of the summer months: J. A. Lambert, Sr., J. A. Lambert, Jr., Jed. Hatch, Clyde Hatch, Loren Hatch, Chas. Rich, H. Ruppel and A. A. Hatch. They are all sheep men.

There is a road from Vernal, Utah, crossing the township; it forks near the corner of sections 16, 17, 20 and 21, one running northerly to Pot Creek and the other easterly to Wild Mountain in Colorado. These roads are not improved, but are travelled by automobile. The nearest supply point is Vernal, Utah, 35 miles southwesterly.

There is no flowing stream in the township, but small springs at the following locations:  $NE\frac{1}{4}$  of  $SE\frac{1}{4}$ , and  $NW\frac{1}{4}$  of  $NE\frac{1}{4}$ , section 31, and  $SW\frac{1}{4}$  of  $SW\frac{1}{4}$ , of section 30.

The following is the location of wells from which the sheep are watered:  $NE\frac{1}{4}$  of  $SE\frac{1}{4}$ , section 20,  $SW\frac{1}{4}$  of  $NW\frac{1}{4}$ , section 22,  $NE\frac{1}{4}$  of  $NE\frac{1}{4}$ , section 11,  $SW\frac{1}{4}$  of  $SE\frac{1}{4}$ , section 24. No ties are made from the line.

There is no surface indication of mineral.

The magnetic declination was not taken on account of defective needle.

# CERTIFICATE OF UNITED STATES SURVEYOR

I, Chas. F. Moore, U. S. Surveyor, hereby certify upon honor that, in pursuance of special instructions received from the District Cadastral Engineer for District No. 6, bearing date of the 2nd day of March, 1928, I have well, faithfully, and truly in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of the subdivisions and dependent resurvey of the south boundary, 2 miles of the north boundary, a portion of the subdivisions, T. 2 S., R. 25 E., and establishment of  $\frac{1}{4}$  section corners between closing corners for T. 2 S., R. 25 E., along Utah-Colorado State Boundary, lot corner, section 6, on West Boundary, of the Salt Lake Base and Meridian, in the State of Utah, which are represented in the foregoing field notes as having been executed by me, and under my direction; and that all the corners of said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the District Cadastral Engineer for District No. 6, and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey: Salt Lake City, Utah  
April 16, 1932

*Chas. F. Moore*  
Chas. F. Moore  
U. S. Surveyor.

## APPROVAL

OFFICE OF U. S. SUPERVISOR OF SURVEYS,

Denver Colo. MAR 17 1936, 1936

The foregoing field notes of the survey of subdivision, dependent resurvey of south boundary, 2 miles of the north boundary, and portion of subdivisions, T. 2 S., R. 25 E. Utah, and establishment of  $\frac{1}{4}$  section corners between closing corners for T. 2 S., R. 25 E., along Utah-Colorado State Boundary, and lot corner, section 6, on West Boundary,

executed by Chas. F. Moore, under his special instructions dated March 2, 1928, having been critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys they describe, are hereby approved.

*Charles F. Moore*  
U. S. Supervisor of Surveys.

I certify that the foregoing transcript of the field notes of the above-described surveys in T. 2 S., R. 25 E., has been correctly copied from the original notes on file in this office.

U. S. Supervisor of Surveys.

## T. 34 S., R. 6 W.

The survey of T. 34 S., R. 6 W., Salt Lake Meridian, Utah, was commenced June 24, 1932, by Andrew Nelson, Cadastral Engineer, and Elliot Bird, Surveyor. The survey was executed with Buff and Buff transits No. 9978, used by Andrew Nelson, and No. 18003, used by Elliot Bird. Work was discontinued on this township July 14, 1932, and resumed May 4, 1933, by Elliot Bird.

The instruments were approved for use on this survey by the District Cadastral Engineer for Utah, conditional upon satisfactory field tests, in assignment instructions dated June 22, 1932, and supplemental assignment instructions dated April 26, 1933. The instruments are equipped with Smith solar attachments and full vertical circles. The horizontal limbs are each provided with two double verniers placed opposite to each other and reading to single minutes of arc, which is also the least count of the verniers of the latitude and declination arcs and vertical circles.

All lines of this survey were projected by fore and back sights from meridians determined by hour angle observations made upon Polaris.

June 27, 1932: Stationed at the corner of sections 1, 2, 35, and 36, on the south boundary of T. 34 S., R. 6 W., Salt Lake Meridian, Utah, in approximate latitude  $37^{\circ}48'N.$ , longitude  $112^{\circ}29'W.$ ; at 8h 43.9m a.m., by our watches, which carry correct 105th meridian time, we made an hour angle observation of Polaris, west of the meridian, using instrument No. 9978, making four observations, two each with the telescope in direct and reversed positions, reading the horizontal deflection angle from a flag pole about 40 chains north, in the direction W. to Polaris.

Mean l. m. t. of observations, - - - - 8h 14m 0s a.m.  
 Mean horizontal deflection angle from  
 flag pole to Polaris - - - - -  $0^{\circ} 21' W.$   
 Mean hour angle of Polaris, - - - - - 0h 58.5m  
 True bearing of flag pole, - - - - - North

June 27, 1932: At apparent noon, with instrument No. 9978, in the meridian thus determined, we made an altitude observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb.

Mean observed altitude, - - - - -  $75^{\circ} 31' 30''$   
 Reduced latitude, - - - - -  $37^{\circ} 48' N.$   
 Mean watch time of observation, - - - 12h 2m 53s p.m.  
 Watch carries correct l. m. t.

June 28, 1932: Stationed at the corner of sections 13, 14, 23, and 24, in latitude  $37^{\circ} 50' 30'' N.$ , longitude  $112^{\circ} 29' W.$ , at 1h 35.5m. p. m., by our watches, which carry correct 105th meridian time, we make an hour angle observation on Polaris, west of the meridian, using instrument No. 18003, making four observations, two each with the telescope in direct and reversed positions, reading the horizontal deflection angle from a point on a ledge

about 1 mile N., in the direction W. to Polaris.

Mean l. m. t. of observations, - - - - - 1h 05.5m p.m.  
 Mean horizontal deflection angle from  
 point on ledge to Polaris, - - - - -  $1^{\circ} 20' 30''$  W.  
 Mean hour angle of Polaris, - - - - - 5h 54m  
 True bearing to point on ledge, - - - - - North.

May 4, 1933: Stationed at the corner of sections 16, 17, 20, and 21, T. 34 S., R. 6 W., Salt Lake Meridian, Utah, in latitude  $37^{\circ} 50' 30''$  N., longitude  $112^{\circ} 32' 40''$  W.; at 3h 17.9m p.m., by my watch, which carries correct 105th meridian time, comparison being made with a Western Union clock at Marysville, Utah, on April 27, 1933; with instrument No. 18003, I make an hour angle observation on Polaris west of the meridian, making four observations, two each with with the telescope in direct and reversed positions, reading the horizontal deflection angle from a point on a ledge about 5 miles north, in the direction west to Polaris.

Mean l. m. t. of observation, - - - - - 2h 47.9m p. m.  
 Mean horizontal deflection angle from  
 point on ledge to Polaris, - - - - -  $1^{\circ} 08'$  W.  
 Mean hour angle of Polaris, - - - - - 3h 59.3m.  
 True bearing to point on ledge, - - - - - N.  $0^{\circ} 02'$  W.

The instruments were kept in good adjustment throughout the progress of the survey, and numerous hour angle observations were taken on Polaris to determine meridians from which the lines of the survey were deflected.

#### Measurements.

Unless otherwise specified, all measurements are made with Lallie steel ribbon tapes, five and eight chains in length, compared with a Lufkin standard steel tape, one chain in length, and found correct. The measurements are made on the slope, the vertical angles determined with two large improved K. & E. clinometers, and the slope measurements properly reduced to true horizontal distances.

#### DEPENDENT RESURVEY OF PORTION OF SOUTH BOUNDARY, T. 34 S., R. 6 W. Reestablishment of Surveys executed by Bailey and Burrill, U. S. Deputy Surveyors, in 1874.

The following field notes of the dependent resurvey of portion the south boundary, portion of the north boundary, and portion of subdivisional lines, are the record of the true line courses and distances of the restoration of the original boundaries and subdivisional lines in the true original positions as adjusted to the identified evidence.

Before reconstructing or restoring the corners, the lines of the original survey was retraced, and search made for evidence of the original corner monuments or other calls of the field notes. When duly identified or restored the positions were remonumented.

Chains

The retracement data were submitted for office examination and verification. In order to simplify the record, the true line notes only are supplied here, which refer to the completed resurveys.

From the cor. of secs. 1, 2, 35, and 36, which is a volcanic stone, firmly set, extending 15x10x5 ins., above ground, plainly marked 1 notch on E. edge and 5 notches on W. edge, from which

A pinon, 8 ins. diam., bears N.41°15'E., 24 lks. dist., plainly marked T34S R6W S36 BT

A pinon, 7 ins. diam., bears S.62°15'E., 15 lks. dist., plainly marked T35S R6W S1 BT

A pinon, 10 ins. diam., bears S.32°15'W., 42 lks. dist., plainly marked T35S R6W S2 BT

A pinon, 8 ins. diam., bears N.83°W., 85 lks. dist., plainly marked T34S R6W S35 BT

At the exact corner point.

Set an iron post, 3 ft. long, 2 ins. diam., 5 ins. in the ground to solid rock, and in a mound of stone to top, for cor. of secs. 1, 2, 35, and 36, with brass cap marked

Thence

S.89°32'W., between sections 2 and 35.

Ascend gradually over steep NE. slope of rolling mountainous land, through dense timber and scattered undergrowth.

1.30 Top of abrupt ascent over steep NE. slope, 20 ft. above corner, bears N.80°W. and S.80°E.; thence along gradual N. slope.

7.80 Top of E. rim of draw, bears N.15°W. and S.15°E.; descend abruptly over steep W. slope.

Chains

angle 120

- 11.60 Bottom of draw, 116 ft. below top of E. rim, drains N., about 10.60 chs. to Panguitch Creek; ascend abrupt E. slope.

1920

I remove the mound of stone from the W. side of the post  
to the N. side.

Land, nearly level canyon bottom.

Soil, deep, loose sand; 2nd rate; sandstone formation.

Undergrowth, dense sagebrush and greasewood. No timber.

Fair grazing land.

## DEPENDENT RESURVEY OF PORTION OF SUBDIVISIONS, T. 34 S., R. 6 W.

Reestablishment of Surveys Executed by  
T. C. Bailey, U. S. Deputy Surveyor,  
in 1874.

From the corner of secs. 1, 2, 35, and 36, on the S. bdy.  
of the township, heretofore described.

N. 0° 12' E., between sections 35 and 36.

Descend steep NE. slope of rolling mountainous land, through  
dense timber and scattered undergrowth.

6.00

Enter bottom of Panguitch Creek Canyon, bears E. and W.;  
thence through dense cottonwood timber, and dense under-  
growth of willows, birch, and squaw brush.

DEPENDENT RESURVEY OF A PORTION SUBDIVISION, T.34S., R.6W.

Chains

- 6.90 Panguitch Creek, stream 25 lks. wide, 18 ins. deep, in canyon, 200 ft. below cor., flows N. 75° E.; continue across bottom of canyon through dense undergrowth; scattered yellow pine timber along N. side of canyon.
- 10.05 Pipe line, 2 ft. diam., at N. side of canyon and at base of abrupt ascent, bears E. and W. Pipe line carries water from Panguitch Creek at a point about  $\frac{1}{4}$  mile to the west, to an electric power plant about  $\frac{1}{4}$  mile to the east. Ascend abrupt S. slope through dense juniper and pinon timber.
- 16.23 Point from which dam across Panguitch Creek, bears S. 75° W., about 25.00 chs. dist. From the dam, an ice house bears about N. 30° W., 3.50 chs. dist, and a cabin bears West, about 12.00 chs. dist. Thence ascend gradual S. slope.
- 16.70 Top of ridge, 225 ft. above creek, bears E. and N. 80° W.; descend gradual N. slope.
- 31.00 Road, bears N. 80° E. to Panguitch, and West, to springs in Five-Mile Hollow.
- 39.45 On gradual N. slope, 70 ft. below ridge; the true point for the original  $\frac{1}{4}$  sec. cor. of secs. 35 and 36, cor. stone missing; cor. was established from the original bearing trees which are as follows.

A pinon, 7 ins. diam., bears S. 35° E., 15 lks. dist., (record course and dist.), plainly marked  $\frac{1}{4}$  S36 BT.

A pinon, 6 ins. diam., bears N. 70° W., 25 lks. dist., (record course and dist.), plainly marked  $\frac{1}{4}$  S35 BT.

At the cor. point:

Set an iron post, 3 ft. long, 1 in. diam., 27 ins. in the ground, for the reestablished  $\frac{1}{4}$  sec. cor. secs. 35 and 36, with brass cap marked

$\frac{1}{4}$   
 S35 | S36

1932

Take an additional bearing tree to cor. as follows.

A pinon, 5 ins. diam., bears N. 32°30' E., 52 lks. dist., marked  $\frac{1}{4}$  S12 BT.

Thence:

# DEPENDENT RESURVEY OF A PORTION SUBDIVISION T. 34 S., R. 6 W.

## Chains

N. 0° 10' W., with continuous measurement.

- 41.04 Point which is a northing of 40.00 chs. from the cor. of secs. 11 and 14.

Set an iron post, 3 ft. long, 1 in. diam., 27 ins. in the ground, for  $\frac{1}{4}$  sec. cor. sec. 11 only, with brass cap marked

$\frac{1}{4}$  S11

1932

from which:

A pinon, 12 ins. diam., bears S. 21° 15' W., 99 lks. dist., marked  $\frac{1}{4}$  S11 BT.

A juniper, 5 ins. diam., bears N. 17° 45' W., 46 lks. dist., marked  $\frac{1}{4}$  S11 BT.

- 41.20 Rolling top of ridge, 10 ft. above the  $\frac{1}{4}$  sec. cor. sec. 12, bears E. and W.; descend gradual NE. slope.
- 64.60 Draw, 180 ft. below ridge, drains E.; ascend abrupt S. slope.
- 74.60 Spur, 180 ft. above draw, projects S. 75° E.; descend abrupt N. slope over conglomerate ledges.
- 78.42 True point for the original cor. of secs. 1, 2, 11, and 12 (cor. stone missing). The true cor. point is established at midpoint bet. the two points determined from the courses and distances to the two original bearing trees, given in the official records, which are as follows.

A juniper, 7 ins. diam., bears N. 27° E., 50 lks. dist., dimly marked T34S R6W S1 BT. I blaze and remark this tree with the same markings.

A juniper, 5 ins. diam., bears S. 50° E., 75 lks. dist., dimly marked T34S R6W S12 BT. I blaze and remark this tree with the same markings.

From the reestablished point for the cor., the bearing tree in sec. 1, bears N. 57° 30' E., 46 lks. dist., and the bearing tree in sec. 12 bears S. 42° 30' E., 52 lks. dist.

At the reestablished point for cor., on top of conglomerate ledge, 150 ft. below spur; mark a cross (X) on the surfacerock, over which:

Set an iron post, 3 ft. long, 2 ins. diam., in a mound of stone, 4 ft. base, 3 ft. high, for the cor. of secs. 1 and 12 only, with brass cap marked

T34S R6W

S1  
S11  
S12

1932

Land, rolling and mountainous, with a general southerly and northerly exposure and drainage.

Soil, shallow rocky sand and clay loam; 4th rate.

Undergrowth, sagebrush.

Timber, juniper and pinon on portion of mile.

Fair grazing land.

RESURVEY  
ESTABLISHMENT OF QUARTER SECTION CORNERS

Chains

Thence

N.1°37'E., (reseed course) with continuous measurement.

45.35

The original corner set for the SW. corner of T. 33 S., R. 6 $\frac{1}{2}$  W. and the NW $\frac{1}{4}$  corner of T. 34 S., R. 6 W., heretofore described.

GENERAL DESCRIPTION

The land within the boundaries of this township consists of the rolling and broken east slopes of a wide range of rolling mountains to the west, and has a general easterly exposure and drainage. It is of a volcanic and sandstone formation, and the soil throughout the township consists of a shallow clay and sand loam, mixed with gravel and volcanic rock. The soil in general may be classified as third rate. Along the bottoms of the wide draws, in the foothills, the soil consists of a deep and sand clay loam, and is very fertile.

The timber on the high plateaus and steep north slopes consists of a medium dense growth of yellow and red pine, aspen, red cedar, balsam and spruce, while that on the lower slopes and foothills consists of a medium dense growth of juniper and pinon. The only timber that has any commercial value is the yellow pine.

Throughout the township a medium dense undergrowth of sagebrush, mahogany, service berry, deer, and buck brush, weeds and grass is found, which affords fair grazing for stock during the summer and fall months of the year.

The only portion of the township that was under cultivation at the time of the survey was about ten acres located in the N $\frac{1}{2}$  NE $\frac{1}{4}$  of section 3, and about 5 acres located in the N $\frac{1}{2}$  NE $\frac{1}{4}$  of section 4. This land was owned and was being cultivated by J. Frank Houston, of Panguitch, Utah. At one time approximately 10 acres of land in Homestead Entry Surveys Nos. 49 and 151, located in section 27, had been under cultivation, but at the time of the survey, no farming was being done in this section. The cultivated land in sections 3 and 4, forms a part of a large improved ranch, located in section 34, T. 33 S., R. 6 W., which belongs to J. Frank Houston.

The township has a good supply of water, the largest source of which is Panguitch Creek, which is a stream 30 links wide, and 10 inches deep. This stream enters the township on the south boundary of section 35, and flows in an easterly direction. A large portion of this water is diverted to a pipe line in the SE $\frac{1}{4}$  of section 35, and is carried in this pipe line about two miles to a power house, where it used to generate electric power for the town of Panguitch.

Three Mile Creek, which is a stream about 10 links wide, and 3 inches deep, heads in the west portion of the township, and flows in an easterly direction, leaving the township on the east boundary of section 12.

Sandy Creek, which is a stream about 5 links wide, 3 inches deep, flows in an easterly direction along the north boundary of the township. Numerous other small seeps and spring branches were found in the northwest portion of the township, all of which drain into Three Mile or Sandy Creeks. A spring of good water was found in the SE $\frac{1}{4}$  NW $\frac{1}{4}$  section 27, and two small springs of good water were found in the NW $\frac{1}{4}$  NW $\frac{1}{4}$  of section 27.

A small, shallow lake, with an area of about three acres, is located in the SE $\frac{1}{4}$  SW $\frac{1}{4}$  of section 20. A small lake, with an area of about  $\frac{1}{2}$  acre, is located 5 chains south of the  $\frac{1}{4}$  section corner of sections 29 and 30.

## GENERAL DESCRIPTION

### Chains

Numerous unimproved roads were found throughout the east and northeast portions of the township, over which firewood is hauled to the town of Panguitch. Nearly all portions of the east part of the township can be reached by automobiles from Panguitch, which is situated about .5 miles <sup>to the east</sup> of the township. A 6 inch wooden pipe line diverts the water from a fork of Three Mile Creek in section 18, and bears in an easterly direction to the town of Panguitch where the water is used for culinary purposes.

About three miles of fencing were found in the north portions of sections 3 and 4, and about two miles of fencing, and an old one-room framehouse in section 27, all of which belong to J. Frank Houston.

The township in general is suitable for a summer grazing range for stock, and was being used for this purpose.

All of the township except sections 1, 2, 3, 11, 12, 13, 14, 23, 24, 25, 26, 35 and 36, are within the boundaries of the Dixie National Forest.

At the time of the survey no settlers were living on the unsurveyed portion of the township.

No indication of mineral or oil was found.

The mean magnetic declination throughout the township was found to be  $16^{\circ}30'W$ .

Homestead entry survey No. 151, is located in the NW $\frac{1}{4}$  of section 27. All of the boundaries of this survey have been fenced, and about 5 acres of land at one time was under cultivation. Two small springs are located in the NW. portion of this survey and, at one time, the water from these springs was piped to a ranch house, which is located in the NW. portion of Homestead entry survey No. 49.

Homestead entry survey No. 49 is located in the south portion of section 27 and the NW $\frac{1}{4}$  of section 34. A small portion of this survey also extends into the NW $\frac{1}{4}$  of section 35. A portion of the north part of this survey is fenced, and about 5 acres of land at one time had been under cultivation. A one-room frame house, which is in a dilapidated condition, and a large spring of good water which flows about  $\frac{1}{4}$  second foot of water, are located in the NW. portion of this survey.

All the improvements of both these surveys are owned by J. Frank Houston, of Panguitch, Utah.

## DESCRIPTION AND TEST OF INSTRUMENTS.

The survey was executed with a Buff and Buff solar transit No. 8028, property of the General Land Office. The instrument has a full vertical circle and is equipped with the Smith solar attachment. The horizontal limb is provided with two double verniers placed opposite to each other and reads to single minutes of arc which is also the least count of the verniers of the vertical circle, and the latitude and declination arcs. The instrument was in good condition and was approved for use in this survey, conditional upon satisfactory field tests, by the district cadastral engineer for Utah, in assignment instructions dated May 20, 1931. I examine all the instrumental adjustments before making the field tests hereinafter described.

The directions of the lines surveyed were determined by the solar transit method. The measurements were made with a Lallie steel tape, 5 chains in length, graduated every link for first 100 links, and the balance at intervals of 10 links. The tape was tested by comparison with a Lufkin standard steel tape 1 chain long and found correct. The measurements were made on the slope and the vertical angle of each interval was ascertained by a clinometer in good adjustment; the horizontal equivalents are entered in the field note record.

The data furnished with the special instructions gives the geographic position for the SE. cor. of the Tp. as follows:- latitude  $40^{\circ} 36' N.$ , and longitude  $111^{\circ} 06' W.$

June 13, 1931, in camp located in the SE.  $\frac{1}{4}$  of sec. 27, T. 2 S., R. 7 E., at 4h 15m 48s a. m., l.m.t., or 4h 40m 20s a.m., by my watch, which reads correct 105th meridian time as determined by comparison with a Western Union clock at Salt Lake City, Utah June 12, I make an hour angle observation on Polaris east of the meridian, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground, 8 chs. N. After sunrise, I lay off the azimuth of Polaris,  $1^{\circ} 13'$  to the west, and note a tree on a ridge about two mile S. that is in the meridian thus determined.

In order to verify the latitude of this station and the reading of my watch, I make a meridian observation of the sun, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb as follows:-

Mean observed altitude	-----	$72^{\circ} 34' 30''$
Reduced latitude	-----	$40^{\circ} 37' 37'' N.$
Mean watch time of observation	-----	12h 24m 08s
Watch fast of local mean time	-----	24m 20s
Same by comparison with Western Union clock	-----	24m 32s

Every 30 minutes from 7 to 10.30 a.m., and at 1.30 and 5 p.m., I make proper settings on the arcs of the solar attachment and ascertain that the resulting orientation of the instrument, when compared with the meridian established by Polaris observation, has a maximum error of less than  $1' 30''$ .

I repeat the tests of the arcs daily by noon observations and verify the meridional indications at frequent intervals throughout the survey.

The observed magnetic declination is  $16^{\circ} 30' E.$

## FINAL TEST OF SOLAR ATTACHMENT.

Aug. 23, 1931, at camp located in the SE.  $\frac{1}{4}$  of sec. 27, I test the solar apparatus by comparing its indications with the true meridian established June 13, 1931, heretofore described as follows:-

At 9h a.m., app.t., I set off 40° 37'  $\frac{1}{2}$  N. on the lat. arc; 11° 38' N. on the decl. arc, and determine a meridian with the solar which I find to agree with the true meridian.

At app. noon, with the lat. arc unchanged, I observe the sun on the meridian; the resulting reading of the decl. arc is 11° 36' N., which agrees with the computed decl. of the sun.

At 4h p.m., app. t., with the lat. arc unchanged, I set off 11° 33' N. on the decl. arc, and determine a meridian with the solar, which I find to agree with the true meridian.

## GENERAL DESCRIPTION, T. 2 S., R. 7 E.

The land embraced in this township is within the Wasatch National Forest Reserve, and consists of mountains of the Uintah range, varying in elevation above sea level from 6500 ft. in bottom of Beaver Creek to 10500 ft. on ridge in sections 3 and 4. A high rocky ridge of quartzite formation from 10000 to 10500 ft. above sea level extends in an easterly and westerly direction through sections 1, 2, 3 and 4. The drainage from this ridge is in a northerly and southerly direction. Extending in a westerly direction from section 34, through sections 34, 33, 32, 29, and 30, is a ridge of limestone formation from 8000 to 8500 ft. above sea level. Beaver Creek, which is between these two ridges, draining in a westerly direction, together with Shingle Creek, Upper Setting Creek, Yellow Pine Creek and Slate Creek, tributaries of Beaver Creek, heading in N. portion of township and draining in a southerly direction, form the main drainage of the township.

The township is well watered by Beaver Creek and tributaries. Beaver Creek, a stream of clear water, 20 lks. wide, 6 ins. deep, heads in section 35 at a low divide between drainage of Provo River, and drains in

GENERAL DESCRIPTION, T. 2 S., R. 7 E.

Chains

a westerly and northwesterly direction through sections 35, 34, 27, 28, 21, 20, 19 and 30. Shingle Creek, a stream of clear water, 15 lks. wide, 3 ins. deep, enters the township in section 12, and drains southwesterly in deep canyon through sections 12, 13, 24, 23 and 26, emerging from the canyon in section 35, onto a low divide, known as Shingle Creek divide, which separates the drainage of Provo River and Beaver Creek. On this divide, the water of Shingle Creek divides, a portion draining westerly into Beaver Creek and a portion draining southerly through sec. 35 and empties into the Provo River in T. 3 S., R. 7 E. The major portion of the water of Shingle Creek is diverted into Beaver Creek by a weir in section 35. Upper Setting Creek, a stream of clear water, 10 lks. wide, 3 ins. deep, heads in section 2, and drains in a southerly direction through sections 2, 11, 14, 23, 22 and 27, emptying into Beaver Creek. Yellow Pine Creek, a stream of clear water, 10 lks. wide, 3 ins. deep, heads in section 3, and drains in a southwesterly direction through sections 3, 10, 9, 16 and 17 emptying into Beaver Creek in section 20. Slate Creek, a stream of clear water, 10 lks. wide, 3 ins. deep, heads in section 5 and drains in a southerly direction through sections 5, 8, 17 and 20, emptying into Beaver Creek in section 19. There also is a canyon heading in section 6, which drains in a southerly and southwesterly direction through sections 6, 7 and 18. The drainage of the canyon in secs. 6, 7 and 18, is separated from the drainage of Slate Creek by a high spur of limestone formation, while the drainage of Slate Creek and Yellow Pine Creek; Yellow Pine Creek and Upper Setting Creek; and Upper Setting Creek and Shingle Creek is separated by spurs projecting from ridge in sections 1, 2, 3 and 4, of quartzite formation.

The soil of this township is a rich mountain loam, containing considerable loose rock and may be classed from 2nd to 3rd rate, with the exception of the soil on the slopes of the spurs and ridges in NE. portion of township, which is a shallow, rocky sandy loam; surface rock and sliderock, which may be classed as 4th rate. The soil throughout the township supports a medium growth of sagebrush, chokecherry, service berry, oak and laurel and native grass and weeds which affords excellent grazing for stock.

Throughout the township is found a medium growth of timber in commercial quantities of balsam, spruce, lodgepole, Douglas fir and aspen. On the N. slopes through south portion of township, balsam and Douglas fir predominate; through NE. portion lodgepole, spruce and balsam predominate and through central and western portion aspen predominate. In section 20, scattered yellow pine are found.

A good mountain road suitable for automobile travel, constructed by the forest service from Kamas, Utah to Mirror Lake, passes through sections 19, 20, 21, 28, 27, 26, 35 and 36 of this township. This road is used extensively during the summer months by campers, there being a number of excellent campsites along Beaver Creek. From this road a number of trails have been constructed through the township, making all parts accessible.

A frame house, barn and sheds at the Beaver Creek Ranger Station are located in section 28. Except a narrow strip along Beaver Creek canyon, no part of this township is suitable for cultivation, but the land is adapted and extensively used for grazing of stock during the summer

## GENERAL DESCRIPTION, T. 2 S., R. 7 E.

## Chains

months, there being an abundant growth of native grass and brush which affords excellent feed.

No indications of mineral, oil, oil shale or coal were noted during the execution of this survey.

# CERTIFICATE OF ~~UNITED STATES~~ SURVEYOR

**Cadastral Engineer**

I, Ralph Gentry, H. S. ~~U. S.~~, ~~U. S. Surveyor~~, hereby certify upon honor that, in pursu-  
of special instructions received from the District Cadastral Engineer for Utah  
bearing date of the 14th day of June, 19 30 I have well, faithfully, and tr-  
in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instru-  
tions, and the laws of the United States; surveyed all those parts or portions of dependent resurvey  
of south boundary of T. 1 S., R. 7 E., and portion of south boundary  
and portion of west boundary of T. 2 S., R. 7 E.; and the survey of  
portion of west boundary and subdivision of T. 2 S., R. 7 E.,  
of the Salt Lake  
Meridian, in the State of Utah, which are represented  
the foregoing field notes as having been executed by me, and under my direction; and that all the corners  
said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instru-  
tions, and the special written instructions of the District Cadastral Engineer for Utah  
and in the specific manner described in the field notes, and that the foregoing are the original field notes  
such survey. Salt Lake City, Utah,  
April 11, 1931.

*Ralph Gentry*  
U. S. Cadastral Engineer ~~U. S. Surveyor~~

## APPROVAL

OFFICE OF ~~U. S.~~ SUPERVISOR OF SURVEYS,  
Denver, Colorado, NOV 21 1938, 19

The foregoing field notes of the ~~survey of~~ dependent resurvey of south boundary  
T. 1 S., R. 7 E., portion of south boundary and portion of west  
boundary of T. 2 S., R. 7 E.; and of the survey of portion of west  
boundary and subdivision of T. 2 S., R. 7 E.,

executed by Ralph Gentry, H. S. ~~U. S.~~ Cadastral Engineer  
under his special instructions dated June 14, 19 30, having been  
critically examined, and the necessary corrections and explanations made, the said field notes, and the survey  
they describe, are hereby approved.

*Wm. H. P. Simon*  
U. S. Supervisor of Surveys

I certify that the foregoing transcript of the field notes of the above described surveys in  
has been correctly copied from the original notes on file in this office.

## DESCRIPTION AND TEST OF INSTRUMENTS.

The survey was executed with a Buff and Buff solar transit No. 8028, property of the General Land Office. The instrument has a full vertical circle and is equipped with the Smith solar attachment. The horizontal limb is provided with two double verniers placed opposite to each other and reads to single minutes of arc which is also the least count of the verniers of the vertical circle, and the latitude and declination arcs. The instrument was in good condition and was approved for use in this survey, conditional upon satisfactory field tests, by the district cadastral engineer for Utah, in assignment instructions dated May 20, 1931. I examine all the instrumental adjustments before making the field tests hereinafter described.

The directions of the lines surveyed were determined by the solar transit method. The measurements were made with a Lallie steel tape, 5 chains in length, graduated every link for first 100 links, and the balance at intervals of 10 links. The tape was tested by comparison with a Lufkin standard steel tape 1 chain long and found correct. The measurements were made on the slope and the vertical angle of each interval was ascertained by a clinometer in good adjustment; the horizontal equivalents are entered in the field record.

The data furnished with the special instructions gives the geographic position for the SE. cor. of the Tp., as follows:- latitude  $40^{\circ} 36' N.$ , and longitude  $111^{\circ} 13' W.$

Sept. 14, 1931, in camp located in the SW $\frac{1}{4}$  of the SE $\frac{1}{4}$  of sec. 23, T. 2 S., R. 6 E., at 3h p.m., app. t., I set off  $40^{\circ} 38' N.$  on the lat. arc;  $3^{\circ} 33' N.$  on the decl. arc; and determine a meridian with the solar, noting a tree in the meridian thus determined on a ridge about one mile south.

Sept. 15, 1931, at 5h 19m a.m., l.m.t., or 5h 44m a.m., by my watch which is 25 minutes fast of l.m.t., I make an hour angle observation on Polaris west of the meridian, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground 8 chains S. After sunrise, I lay off the azimuth of Polaris,  $1^{\circ} 03'$  to the east, and note that the tree on ridge about one mile S. in the meridian determined by the solar agrees with this meridian.

At 8h a.m., app. t., I set off  $40^{\circ} 38' N.$  on the lat. arc;  $3^{\circ} 16' N.$  on the decl. arc; and determine a meridian with the solar, which I find to agree with the true meridian.

At a station near the  $\frac{1}{4}$  sec. cor., bet. secs. 13 and 24, at app. noon, I set off  $40^{\circ} 38\frac{1}{2}' N.$  on the lat. arc, and observe the sun on the meridian; the resulting reading of the decl. arc is  $3^{\circ} 12' N.$ , which agrees with the computed declination of the sun.

In order to verify the latitude and the reading of my watch, I make a meridian observation of the sun, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb as follows:-

DESCRIPTION AND TEST OF INSTRUMENTS, T. 2 S., R. 6 E.

Chains

Mean observed altitude of sun ----- 52° 33'  
Reduced latitude ----- 40° 38½' N.  
Mean watch time of observation ----- 12h 20m 23s  
Watch fast of local mean time ----- 0h 25m

I test the arcs daily, weather conditions permitting, by noon observations, and verify the meridional indications at frequent intervals throughout the survey.

The observed magnetic declination is 16° 30' E.

DEPENDENT RESURVEY OF  
PORTION OF NORTH BOUNDARY OF T. 2 S., R. 6 E.

Reestablishment of surveys executed by Baxter and Blossom, U. S. deputy surveyors in 1899.

Soil, rocky mountain loam; 2nd to 3rd rate:

Timber, medium dense aspen and scattered balsam and  
lodgepole.

Undergrowth, chokecherry, service berry and sagebrush.  
Medium growth of grass and weeds. Good grazing land.

## GENERAL DESCRIPTION.

The land embraced in this fractional township is within  
the Wasatch National Forest Reserve and consists of  
mountains of the Uintah range, varying in elevation  
above sea level from 7500 feet in bottoms of canyons  
to 9000 feet on ridge in section 11. A high ridge of  
limestone formation from 8500 feet to 9000 feet above  
sea level extends in a northeasterly and southwesterly  
direction through sections 1, 12 and 11. The drainage  
to the north of this ridge is in a northwesterly and  
westerly direction and is formed by Hoyt's Canyon and  
tributaries. The drainage to the south of the ridge is  
in a southwesterly direction and is formed by deep  
canyons. Hoyt's Canyon heads in section 1 and drains  
westerly through the north portion of sections 1 and 2.

The soil of this fractional township is a deep, rich  
mountain loam containing considerable loose rock, and  
supports a medium dense undergrowth of chokecherry, sage-  
brush and service berry. Through sections 13 and 14,  
considerable oak and mahogany brush is found.

GENERAL DESCRIPTION, T. 2 S., R. 6 E.

Chains

Located in the SE.  $\frac{1}{4}$  of section 11 is a small spring of clear water from which a small stream drains south into section 14. In the NW.  $\frac{1}{4}$  of section 2 and in the bottom of canyon draining in a southwesterly direction through SE. portion of section 13, small streams of water are found. These streams furnish water for stock that graze on this fractional township.

Throughout the fractional township is found a medium growth of aspen and scattered balsam and lodgepole timber, except on the north and northwest slopes where a medium growth of balsam, spruce, lodgepole and Douglas fir is found.

No part of this fractional township is suitable for cultivation, the slopes being too steep, but the land is adapted and extensively used for grazing of stock during the summer months, there being an abundant growth of native grass, weeds and brush which affords excellent feed for stock.

Numerous trails extend through this fractional township and all parts are accessible to stock.

The mean magnetic declination was found to be 16°30'E.

# CERTIFICATE OF ~~UNITED STATES~~ SURVEYOR

I, Ralph Gentry, ~~U.S. Cadastral Engineer~~, ~~U.S. Surveyor~~, hereby certify upon honor that, in pursu-  
 of special instructions received from the District Cadastral Engineer for Utah  
 bearing date of the 14th day of June, 19 30, I have well, faithfully, and tru-  
 in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instru-  
 tions, and the laws of the United States, surveyed all those parts or portions of dependent resurvey  
 of portion of N. bdy., and portion of subdivision, and the survey of  
 portion of subdivision of T. 2 S., R. 6 E.,

of the Salt Lake  
 Meridian, in the State of Utah, which are represented in  
 the foregoing field notes as having been executed by me, and under my direction; and that all the corners of  
 said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instru-  
 tions, and the special written instructions of the District Cadastral Engineer for Utah  
 and in the specific manner described in the field notes, and that the foregoing are the original field notes of  
 such survey. Salt Lake City, Utah,  
May, 20, 1932.

Ralph Gentry  
~~U.S. Cadastral Engineer~~ ~~U.S. Surveyor~~

## APPROVAL

OFFICE OF ~~U.S.~~ SUPERVISOR OF SURVEYS,  
 Denver, Colorado, NOV 21 1936

The foregoing field notes of the survey of dependent resurvey of portion of N. bd.  
and portion of subdivision, and of the survey of portion of  
subdivision of T. 2 S., R. 6 E.,

executed by Ralph Gentry, ~~U.S.~~ Cadastral Engineer.  
 under his special instructions dated June 14, 19 30, having been  
 critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys  
 they describe, are hereby approved.

Charles E. Bunker  
~~U.S. Supervisor of Surveys~~

~~I certify that the foregoing transcript of the field notes of the above-described surveys in~~  
~~has been correctly copied from the original notes on file in this office.~~

~~U.S. Supervisor of Surveys~~

# TOWNSITE OF BOULDER, UTAH.

Survey commenced September 5, 1935, and executed with Buff and Buff light mountain transit No. 18003. The instrument is the property of the General Land Office, and has two double verniers placed opposite to each other and reading to single minutes of arc, which is also the least count of the verniers of the latitude and declination arcs, and vertical circle. The instrument was kept in good adjustment throughout the progress of this survey, and was approved for use on the survey by the district cadastral engineer, for Utah, in assignment instructions dated August 21, 1935.

The bearings and courses of the lines of this survey, were determined by deflection angles from true meridians determined by hour angle observations on Polaris, and were carried forward by transit line, taking the mean of direct and reversed sights at each instrument station, and removing all obstructing undergrowth and timber.

The measurements of the subdivision of section surveys were made with a Lallie steel ribbon tape 5 chains in length. This tape is graduated in links for the first 100 links and thereafter at intervals of 10 links. The first link is also graduated to tenths of a link. The measurements of the lots and streets in the townsite survey, were made with a Lallie steel tape 200 feet in length. This tape is graduated into tenths of a foot for the first foot and thereafter at intervals of 1 foot. Both tapes were tested and found correct, comparison being made with a Lufkin standard steel tape, 66 feet in length. The measurements were made on the slope, the vertical angles determined with the transit, and the slope measurements properly reduced to true horizontal distances which only appear in these notes.

In order to determine a meridian for the commencement of this survey, and to check the latitude of the station at which the observations were made, I proceed as follows.

September 5, 1935: Stationed at the  $\frac{1}{4}$  sec. cor. for the E. boundary of sec. 26, T. 33 S., R. 4 E., S.L. Meridian, Utah, in approximate latitude  $37^{\circ}55'15''$  N., longitude  $111^{\circ}29'$  W.; at 9h 01.4m a.m. by my watch which carries correct mountain standard time, comparison being made with radio time signals over station K. S. L. on this date, I make an hour angle observation on Polaris west of the meridian, making 6 observations, three each with the telescope in direct and reversed positions, reading the horizontal deflection angle from a flag pole about 20 chains N., in the direction west to Polaris.

Local mean time of observation	8h 35.5m a.m.
Mean horizontal deflection angle from flag pole to Polaris	$1^{\circ} 18.4'$ W.
Azimuth of Polaris	$1^{\circ} 19.4'$ W.
True bearing of flag pole	N. $0^{\circ}01'$ W.

At apparent noon, with the instrument in the meridian, I make an altitude observation of the sun for latitude, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously, the altitude of the sun's upper limb and the transit of the sun's east limb.

Mean observed altitude	$59^{\circ} 02'$
Reduced latitude	$37^{\circ} 55' 39''$ N.

Except for a tract of land containing 7.50 acres, located in the SW $\frac{1}{4}$  of sec. 25, and the SE $\frac{1}{4}$  of sec. 26, T. 33 S., R. 4 E., which I designate as tract 37, and is withdrawn for use of the U.S. Forest Service as a ranger

## TOWNSITE OF BOULDER, UTAH.

## Chains

station, the townsite of Boulder, Utah, embraces the following subdivisions.

SW $\frac{1}{4}$  lot 1, lots 5, 6, and 7, E $\frac{1}{2}$ NW $\frac{1}{4}$ SW $\frac{1}{4}$  and SE $\frac{1}{4}$ SW $\frac{1}{4}$  of sec. 25, and SE $\frac{1}{4}$ NE $\frac{1}{4}$ , E $\frac{1}{2}$ SW $\frac{1}{4}$ NE $\frac{1}{4}$ , E $\frac{1}{2}$ SE $\frac{1}{4}$ NE $\frac{1}{4}$ , E $\frac{1}{2}$ NE $\frac{1}{4}$ SE $\frac{1}{4}$ , and E $\frac{1}{2}$ NE $\frac{1}{4}$ SE $\frac{1}{4}$  of sec. 26, T. 33 S., R. 4 E.

In order to determine the boundaries of the above subdivisions and the townsite, I make independent resurvey of the boundaries of secs. 25 and 26, and a subdivision of section survey of said secs. as follows.

## Random Lines.

From the cor. of secs. 25, 30, 31, and 36, on the E. bdy. of T. 33 S., R. 4 E., hereinafter described.

North, bet. secs. 25 and 30.

45.500 Intersect the witness cor. to the  $\frac{1}{4}$  sec. cor. secs. 25 and 30, hereinafter described, and which is North, 5.50 chs. dist. from the true point for the  $\frac{1}{4}$  sec. cor.

The course of this line therefore is, North, and the distance is 45.500 chs.

From the witness cor. to the  $\frac{1}{4}$  sec. cor.

North, with new measurement.

34.625 Fall 9.1 lks. W. of the cor. of secs. 19, 24, 25, and 30, hereinafter described.

The course of this line therefore is, N. 0°09' E., and the distance is 34.625 chs.

West, bet. secs. 24 and 25.

40.173 Fall 1.2 lks. S. of the  $\frac{1}{4}$  sec. cor. secs. 24 and 25, hereinafter described.

The course of this half mile therefore is, N. 89°59' W., and the distance is 40.173 chs.

From the  $\frac{1}{4}$  sec. cor.

West, with new measurement.

40.137 Fall 4.7 lks. S. of the closing cor. of secs. 24 and 25, hereinafter described.

The course of this half mile therefore is, N. 89°56' W., and the distance is 40.137 chs.

South, along the W. bdy. of sec. 25.

0.992 Intersect the cor. of secs. 23 and 26, hereinafter described.

Continue on same line with continuous measurement.

41.060 Fall 1.2 lks. W. of the  $\frac{1}{4}$  sec. cor. sec. 26, hereinafter described.

The course of this line therefore is, S. 0°01' E., and the distance is 41.060 chs.

From the  $\frac{1}{4}$  sec. cor.

The course of this half mile therefore is, N. 89°59' E., and the distance is 40.396 chs.

## True Lines.

Reestablishment of surveys executed by Wm. R. Johnston, U.S. Transitman, in 1916.

From the cor. of secs. 25, 30, 31, and 36, on the E. bdy. of the township, which is a volcanic stone, 10 x 6 x 6 ins. above ground, firmly set, marked 5 notches on N. edge and 1 notch on S. edge. Cor. is witnessed by a mound of stone to the W. and one bearing tree as follows.

A juniper, 12 ins. diam., bears N. 8°15' E., 123 lks. dist., marked T33S R5E S30 BT.

At the cor. point, on rocky SW. slope, at the SE. cor. of stake and rider fences bearing N. and S.

Set an iron post, 3 ft. long, 2 ins. diam., 20 ins. in the ground to solid rock and in a mound of stone to top, with the original cor. monument alongside, for cor. of secs. 25, 30, 31, and 36, with brass cap marked

T33S	
R4E	R5E
S25	S30
S36	S31
1935	

I take additional bearing trees to cor. as follows.

A scrubby juniper, 6 ins. diam., bears S. 59°45' E., 72 lks. dist., marked BT.

A pinon, 3 ins. diam., bears S. 29°30' W., 31 lks. dist., marked BT.

A pinon, 3 ins. diam., bears N. 16°45' W., 106 lks. dist., marked BT.

Thence:

North, on true line, bet. secs. 25 and 30.

Ascend gradual SW. slope of mountainous land, through medium dense juniper and pinon timber and undergrowth of sagebrush and yellow top. Line follows along the E. side of stake and rider fence bearing northerly.

14.857 Wash, 40 lks. wide, 5 ft. deep, drains W.

16.157 Stake and rider fence, bears E., and W. 1.50 chs. dist. to junction with fence bearing N. and S.

22.841 Base of abrupt ascent over steep ledgy SW. slope, bears NW. and SE.

38.402 Top of abrupt ascent, 130 ft. above cor., bears E. and

# TOWNSITE OF BOULDER, UTAH.

Chains

and slopes W.; descend gradually along steep NW. slope of nearly inaccessible white sandstone ledges.

40.000

True point for the  $\frac{1}{4}$  sec. cor. secs. 25 and 30, which point is established at record course and distance (South 5.50 chs.) from the witness cor. to the cor. of said secs. True cor. point falls on steep nearly inaccessible W. face of sandstone ledges.

Set an iron post, 18 ins. long, 1 in. diam., 12 ins. in a hole drilled in the surfacerock, for  $\frac{1}{4}$  sec. cor., with brass cap marked

## Chains

- 12.059 Junction of net wire fence from the W., with net wire fence bearing N. and S.
- 14.538 Junction of net wire fence from the S., with net wire fence bearing E. and W., at the NE. cor. of pasture belonging to the Forest Service.
- 14.614 Canal, 30 links wide, 2 ft. deep, drains SE.
- 15.000 (990.0 ft.) To angle point No. 1, Tract 37, and place of beginning. Tract 37 contains 7.50 acres.

Due to the position, the improvements, and areas of the holdings issued under permits from the Forest Service to the bona fide settlers, and the irregular boundaries of the Townsite of Boulder, Utah, no practicable scheme or plan of survey could be determined in which the townsite could be surveyed into regulation blocks and lots, and protect the holdings of the settlers.

The holdings of the majority of the settlers consists of approximately two to three acres, and these holdings, and the present street system of the townsite, appear to have been located with reference to the fenced position of the pasture belonging to the Forest Service, and not with reference to the position of the boundaries of the pasture, as called for in the instructions for the survey of Tract 37.

In order to protect the present position of the holdings of the settlers, and to give each settler the amount of land he is now holding under the permits issued by the Forest Service, the townsite was surveyed into 42 lots, beginning with lot No. 1, in the northeast corner of the townsite, and proceeding west and east alternately through the townsite, with progressive numbers to lot No. 42, in the southeast corner of the townsite. The corner of each lot is monumented with a permanent monument, which consists of the regulation one inch iron post, or a juniper post, 3 feet long, with a six inch squared top. Each monument is marked showing the number of the lot for which it marks, and B T S for Boulder Townsite. No corner was set for the southwest corner of lot 20, and the northwest corner of lot 21, as the point for corner falls on inaccessible face of cliff. Where practicable, the courses of the boundaries of the lots were run parallel, or at right angles, to the bearing of the line between sections 25 and 26.

## NAMES OF STREETS.

East and West streets from the South:

"A" Street.	"B" Street
"C" Street.	"D" Street
"E" Street	

North and South streets from the West:

First West Street  
Canyon Road  
First East Street  
Second East Street  
Third East Street

All streets are 60.0 feet wide except "C" Street and portions of "B" Street.

"B" Street is 85.9 feet wide at angle point No. 11 of the townsite, and 87.5 feet wide at angle point No. 12 of the townsite. The remainder of this street is 60.0 feet wide.

"C" Street is 67.5 feet wide at angle point No. 13 of

# TOWNSITE OF BOULDER, UTAH.

Chains

the townsite, and 69.8 feet wide at angle point No. 6 of the townsite.

"B" Street extends clear across the townsite due to a street left by the Forest Service when fencing their holdings in the South portion of Tract 37.

The portion of Canyon Road along the West boundary of Tract 37 is only 30 feet wide, but the West fence erected by the Forest Service when fencing this tract, is 30 feet East of the true position for the West boundary of said tract, therefore, making available a street 60 feet wide.

"D" Street does not extend clear across the townsite due to steep inaccessible ledges in lots 13, 14, 19, and 20.

## SURVEY OF LOTS.

204.3

To the NE. cor. of Lot No. 42, and place of beginning.

Lot No. 42 consists of rolling land covered with a scattered growth of juniper and pinon timber. The N. and E. boundaries of the lot are fenced, and a fire place at a small roughly constructed open air dance hall, owned by Alma Wilson, is located in the extreme NW. portion of the lot.

It is bounded on the N. by "A" Street, and on the W. by Third East Street.

The lot is vacant and contains 1.03 acres.

Permanent Monuments at Street Intersections.  
of the center lines.

At the intersection of "A" Street and First East Street.

Set an iron post, 3 ft. long, 3 ins. diam., 4 ft. in the ground, (1 ft. under the surface) surrounded with rock to its top, with a brass cap marked with a cross (X) and the year 1935.

of the center lines

At the intersection of "B" Street and First East Street.

Set an iron post, 3 ft. long, 3 ins. diam., 4 ft. in the ground, (1 ft. under the surface) surrounded with rock to its top, with a brass cap marked with a cross (X) and the year 1935.

## TOWNSITE OF BOULDER, UTAH.

# CERTIFICATE OF UNITED STATES SURVEYOR

I, Elliot Bird, U. S. Surveyor, hereby certify upon honor that, in pursuance of special instructions received from the District Cadastral Engineer for Utah bearing date of the 28th day of September, 1933, I have well, faithfully, and truly in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of Townsite of Boulder, Utah; Embracing the SW 1/4 lot 1, lots 5, 6, and 7, E 1/2 NW 1/4 NW 1/4 and SE 1/4 NW 1/4 SW 1/4 of sec. 25, and SE 1/4 NE 1/4, E 1/2 SW 1/4 NE 1/4, E 1/2 SE 1/4 NE 1/4, E 1/2 SE 1/4 NE 1/4, E 1/2 NE 1/4 SE 1/4, and E 1/2 NE 1/4 SE 1/4 of sec. 26, T. 33 S., R. 4 E.,  
WITH METES AND BOUNDS SURVEY OF TRACT 37.

of the Salt Lake Meridian, in the State of Utah, which are represented in the foregoing field notes as having been executed by me, and under my direction; and that all the corners of said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the District Cadastral Engineer for Utah and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.  
Salt Lake City, Utah.  
January 13, 1936.

  
 U. S. Surveyor.

## APPROVAL

OFFICE OF U. S. SUPERVISOR OF SURVEYS,

DENVER, COLORADO NOV 12 1938, 19

The foregoing field notes of the survey of Townsite of Boulder, Utah, in  
T. 33 S., R. 4 E., Salt Lake Meridian, Utah

executed by Elliot Bird, U. S. Surveyor  
 under his special instructions dated September 28, 1933, having been critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys they describe, are hereby approved.

  
 U. S. Supervisor of Surveys.

I certify that the foregoing transcript of the field notes of the above described surveys in Utah, has been correctly copied from the original notes on file in this office.

U. S. Supervisor of Surveys.
